DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, 27-57, 68, 75, 80, 84 and 90, drawn to a bipolar article ,
classified in class 429, subclass 209.
- II. Claims 22-26, drawn to battery powered device, classified in class 429,
subclass 96.
- III. Claim 58, drawn to a multi-layered lithium ion battery, classified in class
429, subclass 149.
- IV. Claims 59-67, 69-74, 76-79, 81-83, 85-89, drawn to a method of making a
bipolar article, classified in class 29, subclass 623.5.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the bipolar article that the subcombination requires. The subcombination has separate utility such as for use in a fuel cell or a capacitor.

Inventions I and III are directed to a related battery . The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the multi-layered lithium ion battery of Invention III has a different design and mode of operation than the bipolar article of Invention I.

Inventions IV and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method steps of Invention IV do not have to be performed by the specific steps claimed in order to make the bipolar article of Invention I.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1746

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
